

# UNIT Protocol – Enterprise Grade Digital Utility Token

## 1. Mission

A unified digital utility token designed for real world integrations, enterprise grade infrastructure, and compliant global deployment.

## 2. Problem

Most crypto assets lack utility, governance clarity, and enterprise trust. Institutions need transparent, auditable, non custodial digital value rails.

## 3. Solution – UNIT Protocol

• BEP 20 token on BNB Smart Chain • Fully transparent, on chain, fixed supply • Utility first design for integrations, access, rewards, governance signals

## 4. Core Utilities

• Access control for premium digital services • Non custodial governance signaling • Enterprise reward and loyalty infrastructure • Programmable digital value layer

## 5. Tokenomics

• Total supply: 1,000,000,000 UNIT • 40% Liquidity • 25% Contributors & Builders • 20% Strategic Reserves • 10% Public Airdrops • 5% Ecosystem Diversification

## 6. Roadmap

Phase I: Deployment, Verification, Liquidity Phase II: Real world integrations, dashboards, governance tools  
Phase III: Scaling, cross chain expansion, enterprise onboarding

## 7. Compliance

UNIT is a digital utility token, not a security, not an investment contract, and offers no guaranteed returns. Designed for transparent and lawful adoption.

## 8. Vision

A globally interoperable digital utility asset powering the next wave of compliant digital transformation.
