

UNIT Protocol (UNIT)

**Utility-Focused Digital Token Infrastructure
BEP-20 | BNB Smart Chain**

Pitch Deck v1.4 — Live Staking Deployment

Vision

Building transparent, verifiable, and utility-focused blockchain infrastructure on BNB Smart Chain.

The Problem

- Lack of transparency in many token ecosystems
- Hidden supply or unclear allocations
- Overpromised yields without infrastructure
- Weak long-term utility and ecosystem design

The Solution

- Fixed total supply with minting disabled
- Publicly verifiable on-chain allocations
- Live staking infrastructure on BNB Smart Chain
- Transparent smart contract mechanics
- Non-custodial ecosystem approach

Token Overview

Network: BNB Smart Chain (BEP-20)

Token Symbol: UNIT

Maximum Supply: 1,000,000,000 UNIT

Decimals: 18

Minting: Disabled

Official Token Contract:

0x4f5710c96C446b133C59Af006A366d07414B52a9

Distribution Framework

- Strategic Reserves — 30%
- Contributors & Builders — 25%
- Liquidity Allocation — 20%
- Public Ecosystem Distribution — 15%
- Ecosystem & Partnerships — 10%

Live Staking Deployment

Official staking dApp is live on BNB Smart Chain.

Features:

- WalletConnect / Reown integration
- MetaMask, Trust Wallet, SafePal, Binance Web3, OKX, TokenPocket support
- Live reward tracking
- Claim / Compound / Withdraw functions
- Non-custodial staking interaction

Current Parameters:

- 30 days → 5% APR
- 90 days → 7% APR
- 180 days → 9% APR
- 365 days → 12% APR
- Minimum normal stake: 5,000 UNIT
- Minimum small/restake: 500 UNIT
